DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a coating method, classified in class 427, subclass 555.
- II. Claims 11-17, drawn to a coating apparatus, classified in class 118, subclass 620.
- III. Claim 18-20, drawn to a device, classified in class 136, subclass 293.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process does not require depositing a front contact on the substrate and depositing a back contact on the substrate. Thus an apparatus that does not have means to perform these depositions may still perform the process as claimed.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

Art Unit: 1762

(MPEP § 806.05(f)). In the instant case, a different process, such as one in which the substrate is stationary and the deposition means are moved, may produce a patentable equivalent device as that claimed in claims 18-20.

Inventions II and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the device does not require a front contact on the substrate and a back contact on the substrate. Thus, an apparatus that does not have means for depositing these contacts may still produce the device as claimed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and/or III, restriction for examination purposes as indicated is proper.

A telephone call was made to Thomas Nemo on March 8, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1762

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
